Dear Clifford Johnson

Addendum added by **Nick Ray Ball** – 09:17 – London Time – Feb 3, 2023

Earlier in the week I asked Gayle Baldwin for your contact and sent the email you can see below the first two points.

1. I have a very simple/elegant and indeed witty (if I do say so myself) 1,100-word description of QM and superstring theory, written for those who don't appreciate or understand the first thing about it, I would like a very basic check of the fundamentals before I distribute it, and add it to S-World AGI VC and Innovate UK presentations
2. The follow-up to the above is a work in progress but goes on to show how I use my basic knowledge of quantum gravity to craft the 10 Technologies at the heart of S-World AGI in particular the inspirations for T5. (technology 5 of 10) LQG Dreamscape, VSN, which really is something, and is a major part of the S-World AGI presentation to Founders Fund VC.
If you would be interested in talking I will complete this paper and send it to you for your opinion, it will clearly show how LQG was the inspiration for the latest and most potent part of T5. S-World VSN.

Noting that I use LQG, not string theory as it's a lot easier, there is a huge amount of technology inspired by string theory but this particular technology is incredibly powerful, within the combinatorial explosion of the nine lower technologies that make up The 10 Technologies (S-World AGI) (noting that the 10th technology is the combinatorial explosion of the nine lower technologies that turn AGI into as if it were ASI or to be correct HA ASI (Human Assisted Artificial Superintelligence))

Now back to the original email, I sent you-

By **Nick Ray Ball** – 10.05 – London Time – Jan 31, 2023

I heard you discuss your research in quantum gravity.

I am working on economic (both macro and micro) models/technology inspired by (modelled on) quantum gravity.

And I thought he may like to discuss it.

A very basic summary of the power of T7 (technology 7 of 10) can be found here

[\\$1039 Trillion BASIC](https://nickrayball.com/#3)

Applicable to poor and developing economies.

My 10 technologies (in large part) inspired by quantum gravity are advanced and are (when fully developed) AGI (Artificial General Intelligence) but as you can see below the catchy slogan: as if it were — ASI (Artificial Superintelligence) suggest far greater application.

The main website is <https://www.s-world.org> and the main page is [https://www.s-world.org/The S-World Algorithms.php](https://www.s-world.org/The-S-World-Algorithms.php) but you require a login and password for access that I cannot provide on a general email.

However, there are about 5 million words of reach found

[https://nickrayball.com/#6 S-World-AGI Books](https://nickrayball.com/#6)

Please note the first set of links to my first work American Butterfly (2012)

[Part 1](#). The Theory of Every Business (Website)

[Part 2](#) Spiritually Inspired Software (Quantum Economics) (Website)

[Part 3](#). The Network on a String (Superstring Economics) (Website)

[Part 4](#) The Butterfly (Incomplete, continues in following books) (Website)

Here is a quick note I made in a book I'm writing that he will find interesting (even if it is only superstring theory, not m-theory)

See American Butterfly 2012 – [The Theory of Every Business](#), and its follow-up books adding inspirations from [quantum mechanics](#) and [superstring theory](#) to the micro (t1 to 6) and macroeconomics (t6 to t9). Noting that from 2021, T10. S-World Angelwing is the combinatorial explosion of the nine lower technologies.

Which, as I write and consider, talking purely abstractly, is not too far from the superstring theory that inspired [book 3](#).

Where there are three macro technologies and six micro technologies (in place of the three dimensions we all know and theorised 6 smaller dimensions of inner space) and one dimension of time — with time being the combinatorial explosion. Which is not close to inflationary expansion but is a lot more powerful than exponential expansion.

For economic models based on M-Theory see the E-TOE (Economic Theory of Everything) and M-Systems dropdown links on <https://www.angeltheory.org/> (2017/18) or if you prefer the name <https://www.supereconomics.ai/> they are the same.

I am now packaging it all up for Leigh Marie Braswell at Founders Fund (San Francisco) and by the way, a small part of the first technology of the 10 technologies leads to a real-world Santa Barbara real estate network. So there are a lot of things to discuss if interested.

It would be good for me if someone from quantum gravity who knows both the UK and California would discuss – noting that there is no new physics here just economic technology and AGI, and whilst I do have a great passion for m-theory, my most recent work is based on

the far simpler LQG.

Gayle Baldwin kindly sent me <https://physics.usc.edu/Faculty/Johnson/>
